

Alert from the NDEWS Web Monitoring Team: Online mentions of Eutylone

Context: This alert follows a September bulletin from the Washington/Baltimore HIDTA Investigative Support Center, reporting a 2021 increase and 2022 decrease in eutylone.

What was found? Mentions of eutylone on Reddit agree with lab data from HIDTA. Mentions were most prevalent in 2021, with a decrease in mentions the first half of 2022. In Q3 of this year, there has been a return to pre-2022 eutylone mention levels.

To what does Eutylone refer? Eutylone is a synthetic cathinone drug with stimulant and empathogen effects.

How is it being discussed? Eutylone is frequently co-mentioned with MDMA as a party drug, with commenters reporting both positive and negative experiences. Stimulant communities on Reddit also discuss eutylone frequently. Commenters do not frequently use slang terms to refer to the drug.

Drug Terms: Eutylone.
